

SAHIL KAWALE

Full Stack Developer

@ sahil.kawale911@gmail.com <https://linkedin.com/in/sahil-kawale>  Mumbai

SUMMARY

Full Stack Developer specializing in **Java and Spring Boot**, with practical experience developing production-style projects such as e-commerce, food delivery, and task management platforms. Strong foundation in backend architecture, relational databases, API-driven development, and modern front-end fundamentals. Committed to writing efficient, maintainable code and delivering reliable software solutions.

EXPERIENCE

Full Stack Developer Trainee

Techpaathshala

 01/2024 - 01/2025  VIKHROLI

- Successfully completed an industry-oriented training program focused on Java, Spring Boot, MySQL, RESTful API development, and full-stack engineering practices.
- Developed and implemented backend components for real-time projects including an e-commerce application, food delivery service, and a task-management (Jira-like) system.
- Acquired in-depth experience in API architecture, database design, authentication workflows (JWT), and application debugging.
- Worked with Git/GitHub for version control and collaborated in a professional development environment simulating real-world engineering workflows.

PROJECTS

E-Commerce Backend System (Flipkart-Inspired)

To build a scalable e-commerce backend supporting users, products, cart, and order management.

- Developed using **Java Spring Boot**, JPA, MySQL.
- Created modules for users, products, cart, orders, and admin.
- Implemented JWT authentication and relational schema.
- **Issues solved:** handling entity relationships, optimizing cart/order flow, JWT token expiry, slow DB queries.

Zomato Food Delivery Backend – API + DB Design

To design REST APIs and database schema for a food delivery platform.

- Designed MySQL schema for users, restaurants, dishes, and orders.
- Built REST APIs using **Spring Boot** for browsing, ordering, and delivery tracking.
- Added filters, sorting, and pagination.
- **Issues solved:** normalizing database, managing order states, linking restaurants–dishes, maintaining cart consistency.

TaskFlow – Jira-Like To-Do Management Tool

To create a task management tool for teams with task creation, tracking, and workflow updates.

- Built using **React + Spring Boot** with MySQL backend.
- Implemented login, task CRUD, priorities, statuses, and team assignment.
- Added simple dashboard for task tracking.
- **Issues solved:** syncing frontend–backend state, handling role-based access, task update delays.

EDUCATION

Bachelor of Engineering - BE, Computer Engineering

University of Mumbai

 Present

CERTIFICATION

FULL STACK DEVELOPER

TECHPAATHSHALA

SOFTWARE DEVELOPMENT LIFE CYCLE

TECHPAATHSHALA
